

Okay Roue.

This is really excellent as a starting position.

The work I've done on the 'Category & Positioning' document has really helped with structuring the feedback below.

AI helped me produce the Category & Positioning document based on a book called 'Niche Down: How to become legendary by being different'.

If you get an opportunity to read at least the first half of this document (before the website copy) I think it would be great as it really 'gets it' and understands the positioning.

I've worked with the document and AI to come up with the following structured feedback on the current screenshots/wording etc. Changing, deleting updating etc with parts that I didn't agree on.

So here it is, AI's response that I've gone through with a fine tooth comb and adapted.

The product shown in these screens is still largely the product we were designing before we arrived at the new category strategy.

At the moment it says:

Fearless = mindset / composure / confidence / mental reps.

Whereas everything we've now developed says:

Fearless = Off-Pitch Training for footballers.

Mental rehearsal is the mechanism.

Technical, tactical and mental development are what you train.

That distinction should now drive the rebuild.

The biggest thing I would change

Look at the onboarding screen:

"What do you want to **feel** before your next match?"

Then:

Calm / Sharp / Brave / Unshakeable

And the dashboard has:

Composure Score

Browse by Mindset

Calm / Focus / Confidence / Resilience

"Nerves = Performance"

"Building composure"

This is a **mental-performance app**.

It's actually a very polished-looking mental-performance app — but it's precisely the category we decided we *don't* want Fearless Footballer trapped inside.

The new Fearless Footballer should ask something much closer to:

WHAT DO YOU WANT TO WORK ON?

And then the player's world opens up:

Finishing · First Touch · Movement · Passing · Positioning · Scanning · Decision Making · Confidence · Composure · Match Preparation...

That's a dramatically bigger proposition.

A 13-year-old striker doesn't necessarily open Fearless Footballer because he thinks, "*I need to improve my composure score.*"

He might think:

"I want to score more goals."

Now Fearless can give him an **Off-Pitch Training Plan for Finishing**.

And within that plan we can rehearse composure, movement, anticipation, decision-making, finishing technique, reactions to misses, different types of chances, etc.

That is much more football.

The dashboard should feel like a football training HQ

I actually like **FEARLESS HQ**.

I'd keep that concept.

But I'd fundamentally change what HQ is telling the player.

Currently the hero metric is:

COMPOSURE SCORE 82

I'd be very cautious about that. Apart from the category problem, I'm not convinced we should be telling a 10–16-year-old that their psychological characteristic is "82".

It gives a veneer of scientific measurement that I'm not sure the product can genuinely substantiate.

*** I actually think we should simply call this “Training Score”

Its then showing them the effort they re putting in.

Instead, HQ could immediately answer three questions:

What am I working on?

What am I training today?

Am I staying consistent?

Imagine opening it and seeing:

GOOD EVENING, ALEX

YOUR CURRENT FOCUS

Become More Dangerous in the Box

Striker · 4-week programme

TODAY'S OFF-PITCH TRAINING

Finding Space Between Centre-Backs

Tactical · Movement

8 min

*** as discussed we don't need the time

START TRAINING →

Then below:

This week: 3/4 sessions completed

Current streak: 6 days

Next match: Saturday

Programme progress: Week 2 of 4

That feels like a **training platform**.

And importantly, when Mum or Dad sees it, they understand what their \$49.99 is buying.

The language needs a systematic overhaul

This is probably the easiest change technically and one of the most powerful strategically.

I'd move away from "**reps**" as the main product noun. It's clever, but it's still quite abstract. Repetition can remain part of the language, but the thing they're doing is **training**.

*** this is something I have fundamentally known for a while. I don't like the term 'reps'. I do want to get into using the term 'training' And then 'off-pitch training' when we are being very specific.

For example:

Current	Direction I'd move toward
Today's Fearless Rep	Today's Off-Pitch Training
Start rehearsal	Start Training
7-Day Blueprint	Training Plan / Your Programme
Browse by Mindset	Choose What To Work On
Reps	Training
Composure Score	Programme Progress / Weekly Training ** as I said above I think the better option is simply 'Training Score
Building Composure	Current Training Focus
Mindset Rep	Off-Pitch Session
Vault	Possibly Training Library
Mentor	Train With The Pros *Eventually I could ask pro players to tell me the sessions they would work on for a specific outcome and name training programs after them.

We don't need to plaster "Off-Pitch Training™" onto every button. That becomes contrived.

But the overall behaviour and language should make the player think:

I'm going to do some training.

Not:

"I'm going to listen to a mental-performance audio."

That's crucial.

The session player needs the biggest conceptual rethink

Visually I really like aspects of this screen.

The stadium background, progress journey, big play control and immersive feel are all heading somewhere interesting.

But right now:

Nerves = Performance
Composure
Center → Reframe → Rehearse

again tells me I'm inside a psychology intervention.

Now imagine the exact same beautiful player being used for:

BEATING YOUR DEFENDER 1v1

Technical · Winger

8 minutes

and across the top:

SEE → REHEARSE → BECOME

The session might then progress through football situations:

SEE

Create the situation vividly.

REHEARSE

Run through the action and decisions.

BECOME

Rehearse executing it naturally in the match.

That would start embedding **SEE · REHEARSE · BECOME** into the actual product mechanics, rather than it simply being a tagline.

That is much more powerful.

And your three session formats can sit underneath this without complicating the main interface:

Interactive · Full Guidance · Relaxed

with the music choice handled subsequently or remembered from the player's preference.

** here I wouldn't worry too much about the session 'Nerves = performance' as this is simply one of the training sessions for nerves., but I do think they are on to something where they mentioning adding the tagline.

The onboarding is where I would start the redesign

The current onboarding starts with emotional state.

I think the new onboarding should establish a football identity first.

Something along these lines:

LET'S BUILD YOUR OFF-PITCH TRAINING

What position do you play?

Then:

What do you want to work on?

And the answers change according to position.

A striker might see:

Finishing

Movement

Hold-up play

First touch

1v1s

Heading

Confidence

Composure

A central midfielder gets a different world.

Then perhaps:

What's your biggest goal right now?

And:

When's your next match?

Then Fearless produces something tangible:

** Does there need to be a way where players can quickly update when there next match is... or there next 2 or 3 or even next month of matches are?

YOUR FIRST TRAINING PLAN IS READY

BECOME MORE DANGEROUS IN FRONT OF GOAL

7 days · 5 Off-Pitch Training sessions

Built around your position, goals and matchday.

Now we've immediately demonstrated why Fearless isn't Spotify for visualisation audios.

It has prescribed training.

I would also rethink the parent dashboard quite substantially

The instinct behind it is excellent.

Giving parents visibility **without exposing private reflections/audio/session content** is exactly the right philosophy.

I particularly like:

"Open the door, don't grade the rep."

That's thoughtful.

But again, the parent dashboard is currently mostly psychological:

Mood trend

Composure 82

More settled after reps

Nerves = Performance

I'd rather show parents **development behaviour**, not psychological scoring.

For example:

ALEX'S OFF-PITCH TRAINING

Current focus: Finishing & Movement

This week: 4 of 5 sessions completed

Training time: 37 minutes

Current streak: 6 days

Programme: Week 2 of 4

Areas trained this week

Technical ✓

Tactical ✓

Mental ✓

** I agree with most of this... but I think areas trained this week could simply be the session names and how many times if more than once.

And then keep the excellent parent conversation element:

ASK ABOUT THEIR TRAINING

"Which situation did you rehearse today?"

"What are you going to look for in Saturday's game?"

"Was there anything you pictured today that you'd like to try at training?"

Now the parent isn't monitoring their child's psychology.

They're supporting their **football development**.

That feels much healthier and much more aligned with the thing they're paying for.

There's another big opportunity hidden in these screens

The current product is already trying to create **habit**.

That's excellent.

Streaks, weekly plans, today's session, progress, badges — keep that thinking.

But change what the habit represents.

Not:

I did my mindset rep today.

Instead:

I trained today.

That's the behavioural change we're trying to create with the entire category.

Physical training Monday.

Fearless Tuesday.

Team training Wednesday.

Fearless Thursday.

Match Saturday.

Fearless isn't competing with training.

It's filling the spaces between it.

**** I totally agree... but we aren't just filling the space between though as players are obviously going to use this on day that they train also**

And suddenly the calendar feature we've discussed becomes incredibly important.

The visual design

I wouldn't make a wholesale visual change yet.

The dark navy + electric cyan + purple aesthetic works. It feels sufficiently premium and sporting, and it can work from a 12-year-old player through to a professional without becoming childish.

The football imagery helps enormously.

I'd actually increase the amount of **football context** as we develop it: positions, pitch diagrams, player imagery, match situations, programme imagery, maybe subtle tactical visual language.

What I *wouldn't* do is turn it into a cartoonish youth app simply because 10–16 is the core market. A 12-year-old generally wants to feel like they're using what the professionals use, not something designed "for kids."

Your professionals become very useful here.

** I like the aesthetic at the moment. Will it adapt and change over time once its out there? Perhaps and probably. But for now, I really like this. If I can get more pro player images etc on it, that would be a really good thing... but again, that is likely to be the future.

Where I think we are

The designers/developers have created a **good shell for the wrong version of Fearless Footballer**.

That's actually a fortunate position.

We're not looking at this thinking the UX is rubbish and everything needs throwing away. Quite the opposite. A lot of the interface thinking — HQ, daily prescription, plans, streaks, session player, parent view, progression — is valuable.

What needs replacing is the **product ontology underneath it**.

Right now:

Mindset → composure → reps → mental categories → scores.

We want:

Footballer → goal → area of game → programme → Off-Pitch Training → rehearsal → consistency → progression → match.

That single shift will ripple through almost every screen.

And I think it will make the platform **considerably more distinctive**.

Because if I'd seen these screenshots without knowing anything about Fearless, I would have described it as *a football mindset app*.

When we're finished, I want someone to see it for 20 seconds and think:

"Oh, this is where footballers train their game when they're off the pitch."

That's the product expression of the entire strategy we've built.

I think the next useful thing is to **redesign the actual product architecture before anybody spends much more development time polishing these screens** — specifically the onboarding → HQ → programme → session → progress loop, and exactly what appears on each screen. That will give your developer a concrete blueprint rather than simply telling them to "make it more Off-Pitch Training."
